PRESS RELEASE

Topargee launches in BCF stores nationwide

Australian designed water tank gauges now available in-store for RVs, caravans and boats

Australian water management innovator Topargee RV, Caravan & Marine Accessories has launched its full range of water tank gauges in BCF stores across Australia, marking a major step in the company's mission to make precise water monitoring accessible to every traveller.

The partnership sees Topargee's Bluetooth, Flush Mount, and Surface Mount water tank gauges available in 27 BCF locations, giving customers the opportunity to see and experience the technology firsthand.

"We're thrilled to partner with BCF, a brand that shares our commitment to quality, innovation, and helping people enjoy their adventures with confidence," said Danielle Wayne, Co-Owner of Topargee. "Our gauges are all about giving travellers peace of mind knowing exactly how much water they have left in their freshwater tanks, down to the litre."

Designed in Australia and trusted by travellers worldwide, Topargee's gauges are used across RVs, caravans, boats, and off-grid setups to help users conserve and manage their most valuable resource - fresh water.

The BCF rollout comes as Topargee continues to expand its reach internationally, with distribution soon to be underway across North America, the UK, and Europe.

"This milestone with BCF is a proud moment for our small Australian team," added Kylie Trabona, Co-Owner of Topargee. "We grew Topargee to solve a simple problem - running out of water mid-trip - and it's exciting to see our products now helping travellers across the country and soon, around the world."

About Topargee

Topargee is an Australian owned, female led company specialising in precision water management technology for RV, caravan, and marine. Its innovative gauges provide real-time readings of water usage, helping users monitor and conserve water with accuracy and Ease.
